

THE SYSTEM — Feature Guide

A Solo Leveling-inspired fitness and productivity app. Everything is stored locally on your device (`localStorage`) — no account, no cloud, no subscription. Designed to be played for **about a year** of consistent daily use to reach the top rank, not rushed in a few sessions.

Onboarding

- One-time setup quiz: codename, height, weight, age, available equipment, baseline push-up/squat ability, cardio level, and training goal (strength / endurance / balanced / fat loss).
 - Generates your starting stats and calibrates your first Daily Quest difficulty.
 - Ends with an "Awakening" cutscene before you enter the app.
-

Hunter Rank System

- Six ranks: **E → D → C → B → A → S**, each tied to a level threshold.
- Leveling up alone can raise you *up to* the rank where the next Boss lives — but defeating that Boss is what actually unlocks entry into the next rank. You can't level-grind past a Boss you haven't beaten.
- Rank is shown on a glowing badge at the top of the app, with its own color per rank.
- The whole interface tints toward your current rank's color as you climb (blue → violet → crimson → gold).

Stats

- Four RPG stats: **Strength, Agility, Vitality, Sense**.
- Earned automatically from clearing your Daily Quest, logging workouts, and custom routines.
- Each stat has a cap (60 by default) — raised permanently by certain Store accessories, but the stat itself always has to be earned through real activity, never bought directly.

Daily Quest

- One mandatory quest per day: push-ups, sit-ups, squats, and a run, scaled to your level.
- Targets grow gently as you level up, but are capped at sane numbers (max ~24-30 reps, ~3km run at the highest levels) — never anything like "100 push-ups."

- **Rest day** once a week (no quest, streak stays safe) and a **light/recovery day** (targets halved) — built-in recovery instead of daily max intensity.
- Clearing it awards XP and gold, and contributes to your streak.

The Penalty System

- Miss a day (without a Streak Shield active) and the System responds for real:
 - Your **rank visibly demotes** one tier (with its own dramatic red "Rank Down" screen).
 - You lose XP and 15% of your gold.
 - Your streak resets to 0.
- To regain access, you must clear a Penalty Zone task (3 sets of 8 burpees).
- The Monarch's Cloak (Store item) forgives **one** missed day per week — a safety net, not a free pass.

Boss Arena

- Six Bosses, one per rank, based on Solo Leveling antagonists: Trial Goblin (E), Stone Golem (D), Igris (C), Ice Elf Lord (B), Beru the Ant King (A), and The Architect (S, final boss).
- Each Boss is **locked** behind real requirements: minimum level, minimum stats, and sometimes a specific achievement.
- Once unlocked, defeating a Boss means completing its real-life "Finishing Blow" quest — a mix of fitness and productivity tasks (e.g. push-ups, a run, reading pages, a focus session). Tasks auto-complete if you log matching activity elsewhere in the app while a fight is active.
- Defeating a Boss grants a one-time title (e.g. "Goblin Slayer," "Shadow Monarch"), a modest XP/gold bonus, a small permanent stat boost, and unlocks the next rank.
- No penalty for not being ready — locked Bosses just show what you're missing.

Daily XP Cap

- All XP — from quests, custom logging, focus sessions, and routines — is capped at **200 XP per calendar day**.
- This is the actual pacing mechanism: it's mathematically what keeps the journey to S-rank around a year for a consistent user, and makes it impossible to shortcut by over-logging in one sitting.
- A small readout on the Home tab shows how much of today's cap you've used.

Train Tab

- **Strength Benchmarks:** log your Bench Press, Back Squat, Deadlift, and max Pull-ups, and see your estimated percentile vs. general population norms (illustrative, not clinical).
- **Custom Session Logger:** log push-ups, sit-ups, squats, pull-ups, running, reading, bench, deadlift, or a generic custom strength/cardio session for XP and gold (rate-limited to once per activity type per day for stat gains).
- **Custom Routine Builder:** name your own workout (e.g. "Push Day"), add exercises with sets/reps, save it, and log it as completed whenever you actually do it.

Focus Timer

- A Pomodoro-style timer separate from workouts — for studying or any focused work.
- Presets (25 / 45 / 60 min) or a custom duration; pause and resume.
- Completing a session earns a small amount of XP and gold, and counts toward Boss "focus session" requirements.
- Daily log shows each session and your total focused minutes for the day.

System Store

- Spend gold on gear that gives **real passive bonuses while equipped**, not just cosmetic skins:
 - Weapons → bonus XP (flat or %) from all activity.
 - Armor → bonus gold from quests, or the weekly Streak Shield.
 - Accessories (Mana Orb, Iron Will Band, Swiftstep Boots, Shadow Monarch Crown) → permanently raise specific stat ceilings.
- All gear bonuses show as small glowing chips under your rank plate when equipped.

Achievements

- 23 unlockable achievements across streaks, rank-ups, quest counts, lifts, focus time, custom routines, Store purchases, and Boss kills.
- Locked achievements show only an icon and (???) until earned, for a bit of discovery.
- Tracked on the Stats tab and summarized on your Profile.

Analytics (Stats tab)

- 7-day consistency streak grid (hit / rest / missed days).
- Weekly activity bar chart.

- Stat growth line chart over time.
- Body weight log with trend chart.

Profile

- Full summary: codename, height/weight, equipment, rank, level, quests cleared, longest streak, achievements unlocked, Bosses defeated.
- **Export Backup:** download your save as a JSON file.
- **Import Backup:** restore a previously exported save (e.g. when moving to a new device or browser).
- **Reset System:** permanently wipes all local data.

Data & Privacy

- Everything lives in your browser's local storage. Nothing is uploaded anywhere, no account required, no subscription.
- Because it's local-only, moving between devices requires manually exporting and importing a backup file (Profile tab) — there's no live cross-device sync.
